SKILLS

- Documentation Tools
- Web Development
- Version Control (Git)
- API Documentation
- Enterprise Platforms
- Development Tools
- Testing & Automation

PROFILE

Turning complex systems into documentation people actually use. Eight years making APIs, SDKs, and enterprise platforms accessible through clear writing, doc-as-code workflows, and a habit of asking "what does the user need next?"

EMPLOYMENT HISTORY

Freelance Technical Writer & Web Developer

Oct 2023 — Present

Clients: Configcat, Wisej.NET, Roboflow, etc.

Write blogs, API docs, integration guides, and specification references. Plan and execute newsletter and social media outreach.

Build and deploy websites for local businesses — design through deployment. Example: [Quality Kilts](#). Each project ships with documentation baked in, not bolted on.

ESG Technical Author

EVORA Global — Aug 2022 to Sep 2023

Owned documentation for SharePoint extensions and enterprise ESG software. Built standardised release templates and doc-as-code pipelines with Git and CI/CD. Worked alongside product and engineering to keep API references current. Wrote user guides and learning materials, cutting support issues.

Technical Writer & Support Engineer

Transloadit — Sep 2019 to Apr 2022

Documented cloud infrastructure across AWS, Azure, and DigitalOcean. Wrote and maintained API docs, built automated testing and validation into the documentation pipeline, and designed SDK guides and tutorials that developers actually followed. Mentored two junior writers into senior roles.
